

AZS Solutions — Full Competitive UX Audit & SEO Blueprint

Prepared for: Mohammad Hassan | Site audited (live, rendered): <https://azs-ecommerce.vercel.app>

Executive Summary

Full teardown of the live site (rendered with a headless browser — actual layout, not just metadata), a UX audit of 12 real competitor/reference agency sites (screenshotted and structurally inspected), and a sitemap + SEO blueprint for splitting into your two divisions.

- The current site is a single scrolling page (4 anchor links: Solutions, Proof & ROI, Programs, FAQs) — there is no second page. Everything below is anchored to that fact.
- Trendyol — a platform you explicitly required — is missing from the nav, hero, footer, and partner badges. It only appears once, in one case-study caption, which reads as an inconsistency to a visiting Trendyol prospect.
- Three ROAS figures (14.43x, 14.4x, 13.61x) are recycled across unrelated blocks — the global hero stat, a country-level marketplace card, and three separate client case studies — rather than each client showing an independent number.
- None of your 12 reviewed competitors run a single-page site; all 12 have indexable sub-pages, and all 12 publish a blog/insights section. You currently have zero indexable URLs beyond the homepage and no blog.

Part 1 — Rendered Teardown of azs-ecommerce.vercel.app

Rendered with a headless browser at desktop (1440px) and mobile (390px) widths. Findings below are from the actual rendered page, not the site's metadata.

Structural fact: this is one page, not a website

The entire nav is 4 in-page anchors:

- Solutions → [#marketplaces](#) / [#shopify-d2c](#)
- Proof & ROI → [#case-studies](#) / [#calculator](#)
- Programs → [#programs](#)
- FAQs → [#faqs](#)

There is no [/amazon](#), [/shopify](#), [/noon](#), [/trendyol](#), or [/case-studies](#) URL. Every "page" a competitor could rank for independently, you currently rank for zero of. This is the single biggest structural issue and the root cause behind Part 4's SEO gap.

Desktop hero

Actual rendered hero, azs-ecommerce.vercel.app, 1440px width

Problem	Recommended Change	Why It Matters	Impact
Hero badge reads "KSA • USA • UK MARKETPLACE & D2C PARTNER" — three countries and two divisions compressed into one pill, and Trendyol is absent entirely.	Split into two short badges, one per division, and add Trendyol to the marketplace list everywhere it currently says "Amazon, Noon."	A visitor scans for ~3 seconds. A compound badge forces them to parse 3 country codes + 2 business models before they know if you're relevant.	Faster self-qualification, fewer bounces from Trendyol-only sellers who see no mention of the platform they use.
Right-side widget ("Verified Portfolio Volume", animated chart) plus a floating "Growth Advisor" chat bubble both compete for attention next to the primary CTA.	Keep one proof widget max in the hero; move the chat launcher to a fixed corner that never overlaps hero content (it currently does — see mobile section).	Two moving/animated elements plus a chat bubble beside the CTA splits attention at the exact moment you want a single action taken.	Higher hero CTA click-through.

Mobile hero — clipped CTA + overlapping chat widget

Actual rendered mobile hero, 390px width — top nav CTA text is clipped to "Book"

- The primary header CTA ("Book Discovery Call") is cut to just "Book" on mobile — the button container doesn't wrap or shrink the label.
- The floating chat widget ("Wave back!") renders directly over the secondary hero CTA ("Explore Case Studies"), overlapping its tappable area.
- Full mobile page height is 35,218px — roughly 40+ phone-screen scrolls to reach the footer, versus 16,918px on desktop (roughly double the relative length once you account for narrower content stacking). No sticky mobile nav or "jump to division" shortcut exists to shorten that path.

Section-by-section findings (desktop, top to bottom)

#	Section (as built)	Problem → Change → Why → Impact
1	Stats bar (\$150M+ GMV / +340% / 35+ brands / 4.8x ROAS)	Sits directly under the hero with no source/date context. → Add a footnote ("trailing 12 months, aggregated across managed accounts") next to at least one figure. → Unqualified global stats read as marketing copy, not audited numbers, especially next to SalesDuo's live embedded Trustpilot widget. → Small addition, meaningfully higher credibility.
2	Channel pills + "Track 1 / Track 2"	This is the only place the two-division split (Marketplace Operations vs. Shopify & Paid Media) appears — and it's a secondary toggle row, not the nav. → Promote this exact split to the primary navigation (see Part 3). → A structural decision buried mid-scroll doesn't help a visitor who bounces from the hero first. → Division clarity within the first viewport, not the fourth.
3	"3 Core Marketplaces" (KSA / USA / UK cards)	Trendyol has no card, despite being named in a case study later on the same page. → Add a 4th card or fold Trendyol into the KSA card explicitly. → A Trendyol-curious

#	Section (as built)	Problem → Change → Why → Impact
		visitor reads three cards, sees no mention, and leaves assuming you don't cover it. → Recovers an entire platform's worth of qualified traffic.
4	"Live Marketplace & Ad Performance Console" mockups (×3)	Same visual template (dark card, colored KPI tiles, line chart) reused for KSA, USA, and UK, with overlapping ROAS figures (14.4x range in the KSA console; 14.43x and 13.61x elsewhere). → Vary the visual per market or clearly label these as illustrative sample dashboards. → Three markets that all report "discovered" identical-looking performance reads as templated, not verified, proof. → Proof sections that survive skepticism convert better with sophisticated (agency-shopping) buyers.
5	Shopify client tabs (HomeMaster / LIVORA / Creative Things)	Good concept (real store names, real niches) but each reuses the same stat-tile layout and a ROAS figure that reappears elsewhere on the page. → Give each client 1–2 genuinely unique metrics instead of the full repeated tile set. → Repetition undercuts the "documented" claim directly above it. → Stronger case-study section, less to fix if a client ever asks to see the source data.
6	"Marketplace Challenges" (4 bottleneck → solution pairs)	This is the strongest original section on the page — specific problems (Buy Box loss, ACOS, stockouts, suspension risk) mapped to named systems. → Keep this section's structure; reuse this problem→solution pattern as the template for individual service pages in Part 3. → Concrete, specific, and not templated-looking — the opposite of the console mockups above.
7	"What We Manage" (6-box service grid)	Solid service breakdown (Store Setup, Catalog, Pricing, Orders, Advertising, Reporting) — currently only a homepage anchor. → Turn each of the 6 boxes into its own indexable page. → Each box is already a distinct, search-intent-matching service; splitting them is close to zero new content work. → Six new ranking opportunities from content you've already written.
8	Programs (4 tiers)	Tier names and inclusions shown, no price shown on any tier ("Explore Program Scope" only). → Show at least an indicative starting price or price range per tier, even if "custom above \$X." → For a B2B service purchase, total absence of a number (vs. a range) increases drop-off at the pricing step for self-serve researchers. → Fewer unqualified discovery calls, faster-qualified ones.
9	Testimonials	Three quotes with initials-in-a-circle avatars, no linked review platform. → Add a Google/Clutch/Trustpilot badge with a live rating, the way SalesDuo does. → Unverifiable testimonials next to "documented" case studies is a credibility mismatch. → Third-party-verified trust reads as materially stronger than on-site-only quotes.
10	Revenue Simulator	Genuinely interactive input→projection tool. → Keep and expand — none of the 12 reference sites in Part 2 have an equivalent interactive tool. → This is your most defensible UX differentiator. → Worth a dedicated landing page and its own SEO/paid traffic.
11	Footer	Confirms the gap: footer lists KSA / USA / UK marketplaces and Shopify & Ads — no Trendyol link, no blog link. → Add both.

Part 2 — Competitive UX Audit (12 sites, screenshotted)

All 12 were rendered live (not taken from memory). Grouped by which division/market they inform.

KSA / MENA marketplace agencies

Live-rendered hero sections: SalesDuo, HighOnRank, iNOVEX, iMediaff Global

Site	What's actually on the page	Steal this / avoid this
salesduo.com	H1 "Full-Service Amazon Marketing, Sales & Advertising Agency"; live embedded Trustpilot widget (45 reviews, 5-star) directly under the hero CTAs.	STEAL: a real third-party review widget in the hero, not homegrown testimonials. This is the single highest-impact trust element across all 12 sites and something AZS has zero of.
highonrank.com	Nav: Amazon Seller Services / Designing & Marketing / Blogs / About. An unsolicited contact-form modal + a cookie banner both fire on load, on top of the hero.	AVOID: don't interrupt the hero with a lead-capture modal before the visitor has read anything — it's the one clearly negative pattern found in this set.
innovexenterprises.com	H1 "Amazon Agency In Saudi Arabia: Scaling Brands On Amazon.Sa"; an "Amazon SPN Verified Partner" badge and lead form sit directly in the hero.	STEAL: a real, named Amazon certification badge (SPN Verified Partner) in the hero. AZS shows a generic "Certified Dominance" claim with no equivalent named credential.
imediaffglobal.com	H1 "Architecting Extraordinary Global Narratives"; subhead states plainly: "one of Trendyol's top 3 global partner agencies."	STEAL: naming your specific platform-partner tier (if AZS has one) directly in the subhead. This is exactly the kind of Trendyol credibility signal AZS's own site currently lacks entirely.

US / global marketplace & Shopify/DTC agencies

Live-rendered hero sections: Envision Horizons, Podean, Pattern, Tinuiti, Common Thread Collective, We Make Websites, Electric Eye, Darkroom

Site	What's actually on the page	Steal this / avoid this
envisionhorizons.com	Serif editorial headline over a dark-green field; hero image strip is real client product photography (lipstick, supplement bottle, baby carrier), not dashboards.	STEAL: real product photography instead of synthetic dashboard mockups as primary hero proof — reads as premium, not templated.
podean.com	Nav: Solutions / Consulting / Intelligence / Case Studies / Blog / About Us — a clean split between service type and content, not by market.	STEAL: separating "what we do" (Solutions/Consulting) from "proof" (Case Studies) and "content" (Intelligence/Blog) as distinct top-level nav items.
pattern.com	H1 "Win on every Marketplace."; hero is a real product-photo video background with small pill sub-links (Shop, Fulfillment, Pattern Intelligence) overlaid.	STEAL: sub-service pills directly in the hero video, so a visitor can jump straight to the sub-page they need without scrolling.
tinuiti.com	H1 "LOVE GROWTH. HATE WASTE." — a short, memorable brand line, not a service description.	STEAL: a punchy brand tagline can sit above the descriptive line, rather than the descriptive line doing double duty as the H1.
commonthreadco.com	H1 "Common Thread Collective is your ecommerce profit partner"; one large abstract line-chart illustration as the entire hero background — a single graphic, not a grid of stat tiles.	STEAL: one restrained chart-as-art-direction beats AZS's current pattern of a chart plus 4 stat tiles plus 3 more dashboard mockups further down the same page.
wemakewebsites.com	Full-bleed fashion photography hero, nav reduced to Work / Services / Culture / Learn.	STEAL: portfolio-first framing (leads with "Work") for the Shopify/DTC division specifically — matches what a Shopify buyer is there to evaluate.
electriceye.io	H1 "Helping ecommerce brands sell more with strategic design & development"; a real phone mockup shows an actual client's live product page mid-checkout.	STEAL: a real, working add-to-cart screen in a phone frame is more convincing than an abstract analytics dashboard for the Shopify division specifically.
darkroomagency.com	Hero is a single third-party press quote (AdAge) naming real clients (Adobe, Amazon, Everlane), immediately followed by a client-logo strip.	STEAL: leading with an external, attributed quote before any self-description. Strongest pure-credibility hero of the 12.

Note: structuredagency.com blocks automated browsers (bot-detection wall) — view it manually in-browser rather than via a scraper.

Part 3 — Two-Division Sitemap & Navigation

Built around the fact that everything today is one URL. Every item below becomes a real, indexable page.

Primary navigation (replaces the current 4-item anchor nav)

- Marketplace Management ▾ (dropdown: Amazon KSA · Amazon USA · Noon · Trendyol · Listing Optimization · PPC & Advertising · Account Health)
- Shopify & DTC ▾ (dropdown: Store Setup & Optimization · Meta Ads · TikTok Ads · Google Ads · Conversion Rate Optimization)
- Case Studies
- Programs & Pricing
- Blog
- About
- [Book Discovery Call] — kept as the persistent header CTA; fix the mobile clipping bug from Part 1 first.

Full sitemap

Division	URL	Purpose
Marketplace	/marketplace-management/	Hub page — the "3 Core Marketplaces" + bottleneck/solution content from the current homepage, generalized.
Marketplace	/marketplace-management/amazon-ksa/	Amazon.sa-specific: Brand Registry, Buy Box defense, FBA/FBN Riyadh & Jeddah, White/Yellow Friday.
Marketplace	/marketplace-management/amazon-usa/	Amazon.com-specific: DSP, nationwide FBA restock, Sponsored Products/Brand/Display.
Marketplace	/marketplace-management/noon/	Noon KSA-specific listing, fulfillment, and ads content.
Marketplace	/marketplace-management/trendyol/	New page — currently doesn't exist anywhere on the site despite being a required platform.
Marketplace	/marketplace-management/listing-optimization/	Cross-marketplace: catalog, A+ content, keyword harvesting (from "What We Manage" box 2).
Marketplace	/marketplace-management/ppc-advertising/	Cross-marketplace ads (from "What We Manage" box 5).
Marketplace	/marketplace-management/account-health/	Suspension defense, compliance (from Bottleneck #4).
Shopify & DTC	/shopify-dtc/	Hub page — repositioned "Shopify Mastery" section.
Shopify & DTC	/shopify-dtc/store-setup/	Store build/optimization (bilingual AR/EN storefronts).
Shopify & DTC	/shopify-dtc/meta-ads/	Meta Advantage+, UGC, retargeting.
Shopify & DTC	/shopify-dtc/tiktok-ads/	TikTok Shop & creator ads.
Shopify & DTC	/shopify-dtc/google-ads/	Google Performance Max.
Shopify & DTC	/shopify-dtc/cro/	New page — CRO is named in your original brief but has no current section on the page at all.

Division	URL	Purpose
Shared	/case-studies/	Index of HomeMaster / LIVORA / Creative Things + future clients, each on its own /case-studies/[slug]/ page.
Shared	/programs-pricing/	The 4 program tiers, with indicative pricing added per Part 1 finding #8.
Shared	/blog/	New — every one of the 12 competitor sites reviewed in Part 2 has this; AZS has none.
Shared	/about/	Team, regional hubs (Dubai/Riyadh/London/New York — currently footer-only).

Part 4 — SEO Blueprint

Directly downstream of Part 3: none of this is possible while the site is a single URL.

Keyword clusters by new page

Page	Primary keyword	Secondary keywords
/marketplace-management/amazon-ksa/	amazon.sa seller agency	amazon KSA PPC agency, amazon seller account management Riyadh, buy box defense KSA
/marketplace-management/amazon-usa/	amazon USA seller agency	amazon FBA management agency, amazon PPC management USA, amazon DSP agency
/marketplace-management/noon/	noon marketplace management	noon seller agency KSA, noon account management
/marketplace-management/trendyol/	trendyol seller agency KSA	trendyol marketplace management, trendyol account management GCC
/shopify-dtc/	shopify agency Saudi Arabia	shopify DTC growth agency, shopify store management KSA
/shopify-dtc/cro/	ecommerce conversion rate optimization agency	shopify CRO service, storefront CRO KSA USA
/blog/	(supports all of the above)	publish 1 post per target keyword above; every post links back to its matching service page

Meta title / description templates

- Marketplace hub: "Amazon, Noon & Trendyol Marketplace Management Agency | KSA & USA — AZS Solutions"
- Trendyol page: "Trendyol Seller Management Agency (KSA) | AZS Solutions" — description should lead with the same partner-tier language iMediaff uses ("one of Trendyol's top X partner agencies") if AZS can substantiate an equivalent claim.
- Shopify hub: "Shopify & DTC Growth Agency — Meta, TikTok & Google Ads | AZS Solutions"

Internal linking rules

- Every division hub links down to all of its own sub-pages (already planned in the nav dropdown).

- Every platform page (Amazon KSA, Noon, Trendyol...) links to the one case study most relevant to that platform, and to /programs-pricing/.
- Every blog post links to the one service page its target keyword maps to, per the table above — this is currently impossible with zero blog and zero service pages.

Part 5 — Priority Roadmap

Priority	Item
P0 — Critical	Add Trendyol as a first-class platform: nav, hero copy, marketplace cards, footer, and a partner badge if one exists — it is currently claimed in one case study and nowhere else.
P0 — Critical	Split the single page into the sitemap in Part 3 — this blocks every SEO gain in Part 4.
P0 — Critical	Fix the mobile header CTA clipping ("Book Discovery Call" → "Book") and the chat-widget/CTA overlap.
P0 — Critical	Resolve the recycled ROAS figures (14.43x / 14.4x / 13.61x appearing across unrelated hero, country-card, and case-study contexts) with distinct per-client numbers.
P1 — High	Rebuild primary nav around the two divisions (currently only a mid-page toggle, not structural navigation).
P1 — High	Add a live third-party review badge (Trustpilot/Clutch/Google) — every KSA competitor reviewed that has one (SalesDuo) uses it prominently; AZS has none.
P1 — High	Add a named platform certification badge (e.g., an Amazon Ads/SPN partner badge, matching iNNOVEX's pattern) if AZS holds one.
P1 — High	Launch /blog/ — 0 of AZS's pages target long-tail commercial keywords; 12 of 12 reviewed competitors publish one.
P2 — Medium	Reduce homepage density: 10+ numbered sections plus repeated dashboard-style mockups, versus the single-focus heroes used by Envision Horizons, Darkroom, and Common Thread Collective.
P2 — Medium	Give each Shopify client tab (HomeMaster/LIVORA/Creative Things) distinct metrics instead of the same tile layout and overlapping numbers.
P2 — Medium	Build dedicated /case-studies/[slug]/ pages so each client story is independently linkable and indexable.
P3 — Optional	Show indicative pricing (or a starting range) on the 4 program tiers instead of "Explore Program Scope" only.
P3 — Optional	Expand the Revenue Simulator into its own landing page — it's the one feature none of the 12 competitors reviewed have, and is worth dedicated paid/organic traffic.
